Watanabe, T., 11, 237
Weertman, J. R., 161

Subject Index of Volume 166

Alloys
  positive exponent superplasticity in advanced aluminum alloys with nano or near-nano scale grained structures, 109
Aluminium
  positive exponent superplasticity in advanced aluminum alloys with nano or near-nano scale grained structures, 109
  precipitation and recrystallization during processing of a superplastic Al–10Mg–0.1Zr alloy, 135

Ceramics
  high-temperature plasticity effects in bridged cracks and subcritical crack growth in ceramic composites, 211
  interfacial properties and high-temperature mechanical behavior of fiber-reinforced ceramic composites, 185
  mechanics and mechanisms of crack growth at or near ceramic–metal interfaces: interface engineering strategies for promoting toughness, 221
mobility control of ceramic grain boundaries and interfaces, 51
  model for interface reaction control in superplastic deformation of non-stoichiometric ceramics, 89
  processing nanocrystalline ceramics for applications in superplasticity, 145
  reinforcements for ceramic–matrix composites for elevated temperature applications, 179
  superplasticity in ceramic and metal matrix composites and the role of grain size, segregation, interfaces, and second phase morphology, 97
  superplasticity in grained ceramics and ceramic composites: current understanding and future prospects, 119
Composites
  high-temperature plasticity effects in bridged cracks and subcritical crack growth in ceramic composites, 211
  interfacial properties and high-temperature mechanical behavior of fiber-reinforced ceramic composites, 185
  reinforcements for ceramic–matrix composites for elevated temperature applications, 179
  superplasticity in ceramic and metal matrix composites and the role of grain size, segregation, interfaces, and second phase morphology, 97
  superplasticity in grained ceramics and ceramic composites: current understanding and future prospects, 119
Cracking
  high-temperature plasticity effects in bridged cracks and subcritical crack growth in ceramic composites, 211
  mechanics and mechanisms of crack growth at or near ceramic–metal interfaces: interface engineering strategies for promoting toughness, 221
Creep
  role of small-angle (subgrain boundary) and large-angle (grain boundary) interfaces on 5- and 3-power-law creep, 81

Deformation
  model for interface reaction control in superplastic deformation of non-stoichiometric ceramics, 89
  the role of grain boundaries in high temperature deformation, 67

Fibre reinforcement
  interfacial properties and high-temperature mechanical behavior of fiber-reinforced ceramic composites, 185

Grain boundaries
  aggregates of grain boundaries: structure and properties, 29
  grain boundary design and control for high temperature materials, 11
  high resolution transmission electron microscopy and atomistic calculations of grain boundaries in metals and intermetallics, 35
  mobility control of ceramic grain boundaries and interfaces, 51
  orientation imaging microscopy: application to the measurement of grain boundary structure, 59
  role of small-angle (subgrain boundary) and large-angle (grain boundary) interfaces on 5- and 3-power-law creep, 81
  the role of grain boundaries in high temperature deformation, 67
Grain size
  superplasticity in ceramic and metal matrix composites and the role of grain size, segregation, interfaces, and second phase morphology, 97
  superplasticity in grained ceramics and ceramic composites: current understanding and future prospects, 119
Grain structures
  positive exponent superplasticity in advanced aluminum alloys with nano or near-nano scale grained structures, 109

Hall–Petch strengthening
  Hall–Petch strengthening in nanocrystalline metals, 161

Imaging microscopy
  orientation imaging microscopy: application to the measurement of grain boundary structure, 59
Interfaces
  future research directions for interface engineering in high temperature plasticity, 237
  interfacial engineering—a perspective, 1
  interfacial properties and high-temperature mechanical behavior of fiber-reinforced ceramic composites, 185
  mechanics and mechanisms of crack growth at or near ceramic–metal interfaces: interface engineering strategies for promoting toughness, 221
  mobility control of ceramic grain boundaries and interfaces, 51
  model for interface reaction control in superplastic deformation of non-stoichiometric ceramics, 89
  role of small-angle (subgrain boundary) and large-angle (grain boundary) interfaces on 5- and 3-power-law creep, 81
  superplasticity in ceramic and metal matrix composites and the role of grain size, segregation, interfaces, and second phase morphology, 97
Intermetallics
  high resolution transmission electron microscopy and atomistic calculations of grain boundaries in metals and intermetallics, 35

Magnesium
precipitation and recrystallization during processing of a superplastic Al–10Mg–0.1Zr alloy, 135
Mechanical behaviour
interfacial properties and high-temperature mechanical behavior of fiber-reinforced ceramic composites, 185
Metals
Hall–Petch strengthening in nanocrystalline metals, 161
high resolution transmission electron microscopy and atomistic calculations of grain boundaries in metals and intermetallics, 35
mechanics and mechanisms of crack growth at or near ceramic–metal interfaces: interface engineering strategies for promoting toughness, 221

Nano-grained materials
processing of nano-grained materials, 169
Nanocrystals
Hall–Petch strengthening in nanocrystalline metals, 161
processing nanocrystalline ceramics for applications in superplasticity, 145

Plasticity
future research directions for interface engineering in high temperature plasticity, 237
high-temperature plasticity effects in bridged cracks and subcritical crack growth in ceramic composites, 211
model for interface reaction control in superplastic deformation of non-stoichiometric ceramics, 89
positive exponent superplasticity in advanced aluminum alloys with nano or near-nano scale grained structures, 109
precipitation and recrystallization during processing of a superplastic Al–10Mg–0.1Zr alloy, 135
processing nanocrystalline ceramics for applications in superplasticity, 145
superplasticity in ceramic and metal matrix composites and the role of grain size, segregation, interfaces, and second phase morphology, 97
superplasticity in grained ceramics and ceramic composites: current understanding and future prospects, 119
Precipitation
precipitation and recrystallization during processing of a superplastic Al–10Mg–0.1Zr alloy, 135

Recrystallization
precipitation and recrystallization during processing of a superplastic Al–10Mg–0.1Zr alloy, 135
Reinforcement
reinforcements for ceramic–matrix composites for elevated temperature applications, 179

Segregation
superplasticity in ceramic and metal matrix composites and the role of grain size, segregation, interfaces, and second phase morphology, 97

Toughness
mechanics and mechanisms of crack growth at or near ceramic-metal interfaces: interface engineering strategies for promoting toughness, 221
Transmission electron microscopy
high resolution transmission electron microscopy and atomistic calculations of grain boundaries in metals and intermetallics, 35

Zirconium
precipitation and recrystallization during processing of a superplastic Al–10Mg–0.1Zr alloy, 135
precipitation and recrystallization during processing of a superplastic Al–10Mg–0.1Zr alloy, 135
